Claim Objections

1. Claim 1 objected to because of the following informalities: Appropriate correction is required.

Claim 1, is objected due to it is not written in conventional U. S. claim format.

The examiner suggests that applicant rewrite claim 1 in conventional U. S. claim format.

Additionally, the each claim can only have one sentence per claim.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, the phrase "for example" in line 5 renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention and furthermore, it is not clear that the remaining claim recitation after e.g., is a part of the example in applicant's claim 1. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as best understood as being anticipated by Wong et al. (US 2002/0016396 A1). Wong et al. (US 2002/0016396 A1) disclose a capacitor having physical effect through which electrical energy can be stored in resonance excited very small crystalline chemically dipolar particles or layers becoming thereby conductive and which are separated by an electrically insulating media, whereas these storage materials as mixture or fluid resin such as a polymer.
